

As part of the activity "Making an advert for representing partners' traditional product", Portugal was responsible for developing the activity with the "Laima" chocolate product belonging to the partner country Latvia.

The activity was carried out using the curricular program of the ICT discipline of the 8th year - Exploration of computational environments with creation of an original product, using Scratch software. With this software, students can program their own interactive stories, games and animations.

Students were challenged to imagine, create and share an original product, using the "Laima" chocolate theme.

Here are some links with the best results.
