

# WordPress ИНСТАЛАЦИЯ

1. XAMPP - D:\XAMPP
2. WordPress - D:\XAMPP\htdocs\wordpress

## XAMPP инсталация

### 1.1 <https://www.apachefriends.org/index.html>

The screenshot shows the Apache Friends website with the XAMPP Apache + MariaDB + PHP + Perl logo. Below it, a section titled "What is XAMPP?" describes it as the most popular PHP development environment. It highlights that XAMPP is completely free, easy to install, and contains Apache, MariaDB, PHP, and Perl. There are download links for Windows (7.1.9), Linux (7.1.9), and OS X (XAMPP-VM, 7.1.9). A green banner at the bottom announces "New XAMPP-VM for OS X available!" with a "Try it now" button.

### 1.2 XAMPP Control Panel

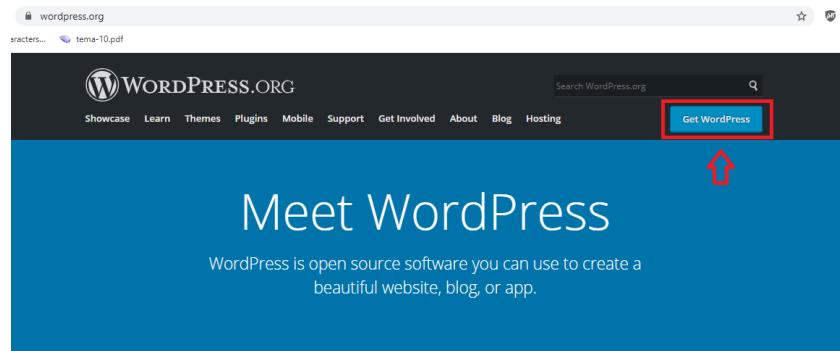

The screenshot shows the XAMPP Control Panel v3.2.2 window. It lists various services: Apache, MySQL, FileZilla, Mercury, and Tomcat. The Apache service is highlighted with a red circle and has a red arrow pointing to its "Stop" button. The MySQL service also has a red circle around its "Stop" button. The control panel includes a sidebar with icons for Config, Netstat, Shell, Explorer, Services, Help, and Quit. A log window at the bottom displays system messages, including logs for Apache and MySQL starting up.

Module	Service	PID(s)	Port(s)	Actions
Apache		5584 920	80, 443	Stop Admin Config Logs
MySQL		3306	3306	Stop Admin Config Logs
FileZilla				Start Admin Config Logs
Mercury				Start Admin Config Logs
Tomcat				Start Admin Config Logs

```
16:45:18 [main] All prerequisites found
16:45:18 [main] Initializing Modules
16:45:18 [main] Starting Check-Timer
16:45:18 [main] Control Panel Ready
16:45:23 [Apache] Attempting to start Apache app...
16:45:23 [Apache] Status change detected: running
16:45:23 [mysql] Attempting to start MySQL app...
16:45:24 [mysql] Status change detected: running
```

## WordPress инсталация

### 2.1.1. <https://wordpress.org/> - за нова версия wordpress-5.7

Beautiful designs, powerful features, and the freedom to build anything you want. WordPress is both free and priceless at the same time.

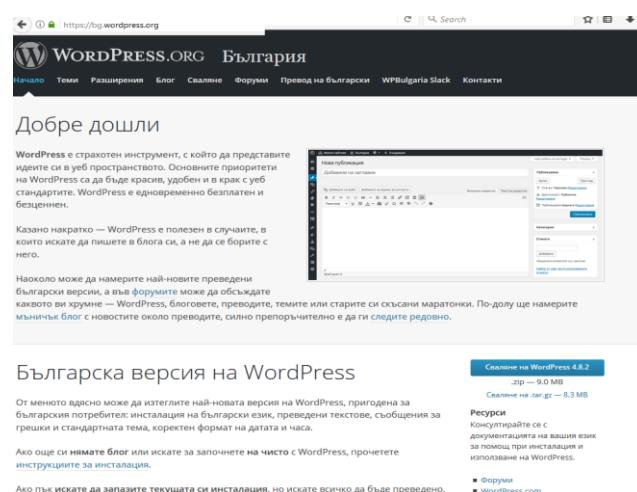

#### Installation

With our famous 5-minute installation, setting up WordPress for the first time is simple. We've created a [handy guide](#) to see you through the installation process.

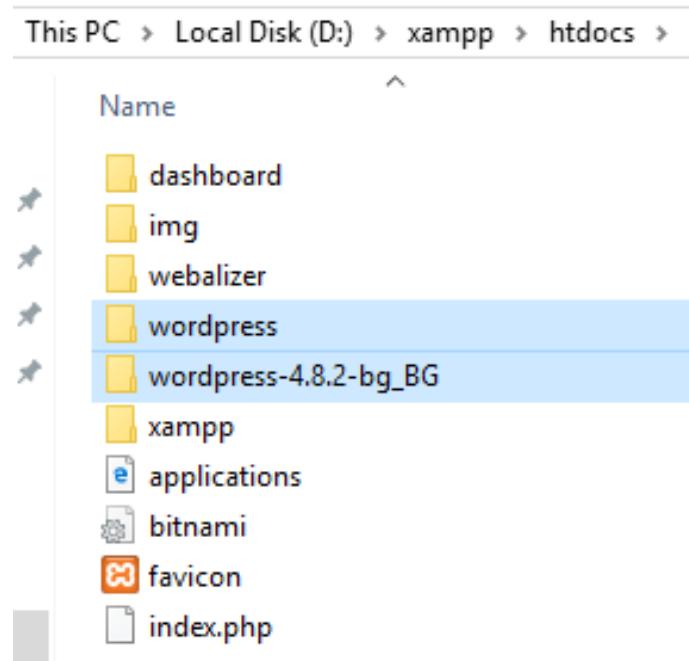

#### Release notifications

Want to get notified about WordPress releases? Join the [WordPress Announcements mailing list](#) and we will send a friendly message whenever there is a new stable release.

### 2.1.2. <https://bg.wordpress.org> - за по-стара версия wordpress-4.8.2-bg\_BG

## 2.2 Разархивирате архива и премествате в подпапка wordpress в D:\XAMPP\htdocs\ wordpress

## 2.3 Отваряте браузър и задавате localhost и (enter)

### Welcome to XAMPP for Windows 7.1.9

You have successfully installed XAMPP on this system! Now you can start using Apache, MariaDB, PHP and other components. You can find more info in the FAQs section or check the HOW-TO Guides for getting started with PHP applications.

XAMPP is meant only for development purposes. It has certain configuration settings that make it easy to develop locally but that are insecure if you want to have your installation accessible to others. If you want have your XAMPP accessible from the internet, make sure you understand the implications and you checked the FAQs to learn how to protect your site. Alternatively you can use WAMP, MAMP or LAMP which are similar packages which are more suitable for production.

Start the XAMPP Control Panel to check the server status.

### Community

XAMPP has been around for more than 10 years – there is a huge community behind it. You can get involved by joining our Forums, adding yourself to the Mailing List, and liking us on Facebook, following our exploits on Twitter, or adding us to your Google+ circles.

Contribute to XAMPP translation at [translate.apachefriends.org](http://translate.apachefriends.org).

Can you help translate XAMPP for other community members? We need your help to translate XAMPP into different languages. We have set up a site, [translate.apachefriends.org](http://translate.apachefriends.org), where users can contribute translations.

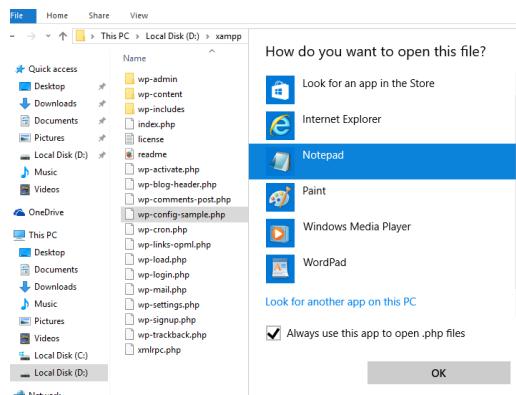

## 2.3 Задавате име на БД

The screenshot shows the 'General Settings' page of phpMyAdmin. At the top, there are tabs for 'БД' (Database), 'SQL', 'Състояние' (Status), 'Потребители' (Users), 'Експорт' (Export), 'Импорт' (Import), 'Настройки' (Settings), and 'Репликация' (Replication). The 'БД' tab is highlighted with a red circle and arrow. On the left, a sidebar lists databases: New, information\_schema, mysql, performance\_schema, phpmyadmin, and test. The main area contains sections for 'Общи настройки' (General settings) and 'Визуални настройки' (Visual settings).

The screenshot shows the 'Databases' page of phpMyAdmin. At the top, there are tabs for 'БД' (Database), 'SQL', 'Състояние' (Status), 'Потребители' (Users), 'Експорт' (Export), 'Импорт' (Import), 'Настройки' (Settings), and 'Репликация' (Replication). The 'БД' tab is highlighted with a red circle and arrow. In the center, there is a search bar labeled 'Създаване БД' (Create DB) containing the text 'wordpress'. Below it, there is a table with columns 'DB', 'Колация' (Collation), and 'Действие' (Action). The table lists existing databases: information\_schema, mysql, performance\_schema, phpmyadmin, and test. A warning message at the bottom states: 'Забележка: Разрешаването на статистика на БД може да коства много голям трафик между web сървъра и MySQL сървъра.' (Note: Enabling statistics on the database can consume a lot of traffic between the web server and the MySQL server.)

wp-config-sample - Notepad
File Edit Format View Help
<?php
/**
 * The base configuration for WordPress
 *
 * The wp-config.php creation script uses this file during the
 * installation. You don't have to use the web site, you can
 * copy this file to "wp-config.php" and fill in the values.
 *
 * This file contains the following configurations:
 *
 * * MySQL settings
 * * Secret keys
 * * Database table prefix
 * * ABSPATH
 *
 * @link https://codex.wordpress.org/Editing_wp-config.php
 *
 * @package WordPress
 */

// ** MySQL settings - You can get this info from your web host ** //
/** The name of the database for WordPress */
define('DB_NAME', 'database_name_here');

/** MySQL database username */
define('DB_USER', 'username_here');

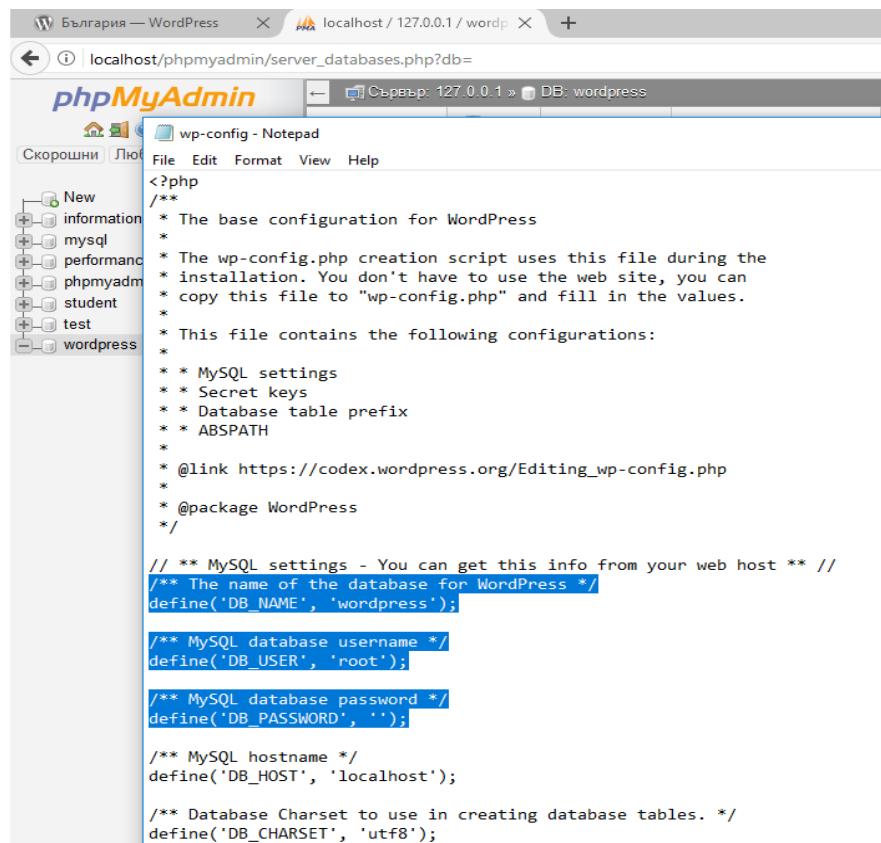

/** MySQL database password */
define('DB_PASSWORD', 'password_here');

/** MySQL hostname */
define('DB_HOST', 'localhost');

/** Database Charset to use in creating database tables. */
define('DB_CHARSET', 'utf8');

```

## 2.6 Въвеждате име на БД, име на ДБ потребител и парола /няма/

The screenshot shows the phpMyAdmin interface with the database 'wordpress' selected. In the left sidebar, there is a tree view with 'New', 'information', 'mysql', 'performance', 'phpmyadmin', 'student', 'test', and 'wordpress'. The 'wp-config - Notepad' tab is active, displaying the contents of the wp-config.php file. The code includes MySQL settings, database name ('wordpress'), user ('root'), and host ('localhost'). It also defines the charset as 'utf8'.

```
<?php
/**
 * The base configuration for WordPress
 *
 * The wp-config.php creation script uses this file during the
 * installation. You don't have to use the web site, you can
 * copy this file to "wp-config.php" and fill in the values.
 *
 * This file contains the following configurations:
 *
 * * MySQL settings
 * * Secret keys

 */

// ** MySQL settings - You can get this info from your web host ** //
/** The name of the database for WordPress */
define('DB_NAME', 'wordpress');

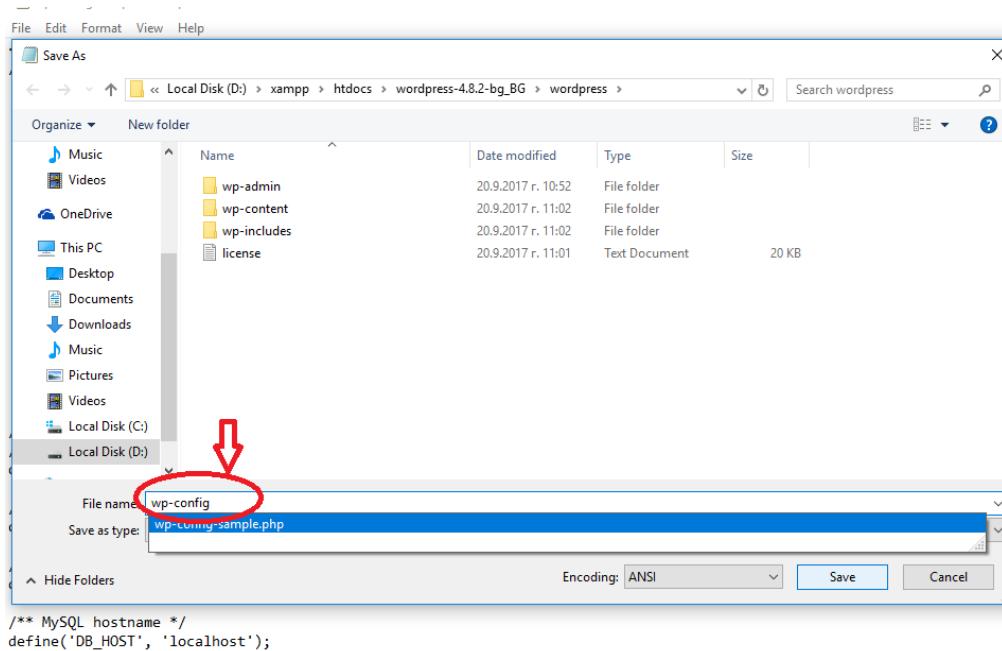

/** MySQL database username */
define('DB_USER', 'root');

/** MySQL database password */
define('DB_PASSWORD', '');

/** MySQL hostname */
define('DB_HOST', 'localhost');

/** Database Charset to use in creating database tables. */
define('DB_CHARSET', 'utf8');
```

## 2.7 Задавате име на файла wp-config.php

The screenshot shows the phpMyAdmin interface with the following details:

- Left sidebar:** Shows databases: New, information\_schema, mysql, performance\_schema, phpmyadmin, student, test, wordpress.
- Main area:** A modal window titled "Създаване на таблица" (Create Table) is open. It has tabs for Структура (Structure), SQL, Търсене (Search), Заявка по пример (Example Query), Експорт (Export), Импорт (Import), Операции (Operations), Права (Privileges), and Процедури (Procedures).
- File browser:** A file browser window titled "Създаване на таблица" is overlaid on the main area. It shows the contents of the "xampp" folder on "Local Disk (D:)".

## 2.8 Отваряте браузър и задавате localhost/wordpress и (enter)

The screenshot shows the WordPress installation page at `localhost/wordpress/wp-admin/install.php`:

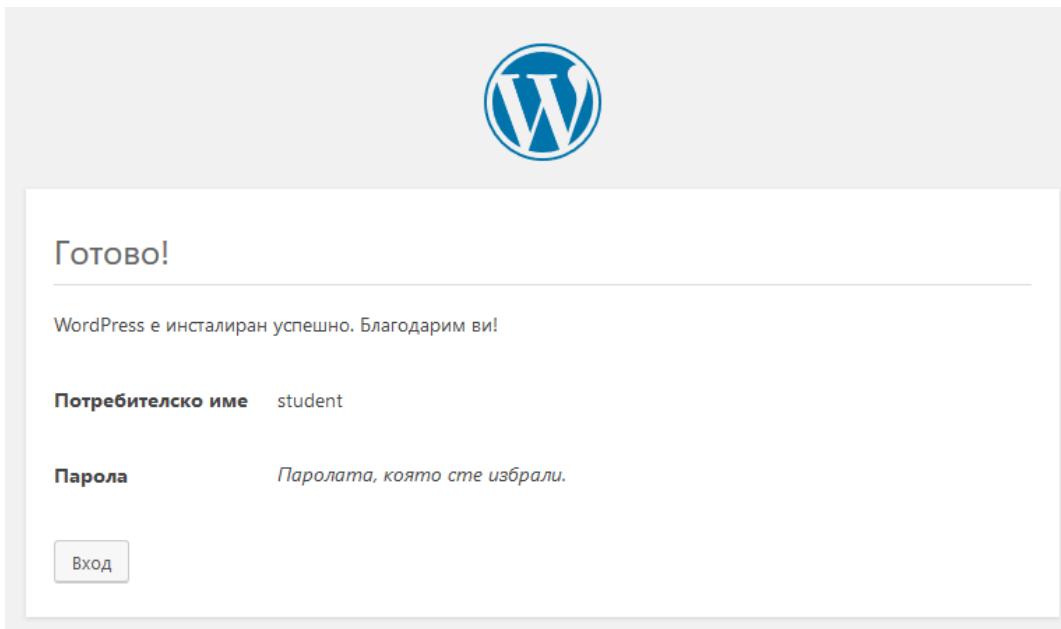

**Добре дошли**

Инсталирайте WordPress за пет минути! Попълнете информацията отдолу и влезте в най-гъвкавата и мощна лична редакционна система в света.

**Необходима информация**

Не се притеснявайте, тези настройки могат да бъдат променени после.

Заглавие на сайта	proba
Потребителско име	student
Парола	Student_1_proba Средна
Видимост на сайта за търсещи машини	<input checked="" type="checkbox"/> Не позволявате на търсачките да индексират този сайт Спазването на това условие зависи от търсещите машини.
<b>Инсталиране на WordPress</b>	

## 2.9. Вход за WordPress

A screenshot of a web browser showing the WordPress login page. The address bar shows 'localhost/wordpress/wp-login.php'. The page features the blue 'W' logo. A form is centered, asking for 'Потребителско име или имейл адрес' (Username or email address) and 'Парола' (Password). The username 'student' is entered in the first field, and a series of black dots represents the password in the second field. To the left of the password field is a checkbox labeled 'Запомняне' (Remember me). To the right is a blue 'Вход' (Login) button. Below the form, links for 'Изгубена парола?' (Lost password?) and '← Назад до proba' (Back to proba) are visible.
